MOUNTING KITS

5.010.000
Mounting kit 1, parallel, 90° image rotation

- Comprehensive selection of mounting brackets for autoVimation enclosures
- Easy to mount
- Flexible adjustment
- Robust design

PRODUCT DESCRIPTION

Mounting kits can be used to mount camera enclosures or other vision components directly to the machine. The adapter- plate is mounted to a T-Slot profile or to any drilled or tapped holes with 25 or 50mm spacing. The one or more mounting brackets included in the mounting kit are then used to mount and adjust the camera system. More than 20 mounting kits are available for the different dovetail sizes. Further mounting options can be created easily by combining the existing adapter plates with one or more mounting brackets or angles available.

autoVimation offers a comprehensive selection of mounting brackets. Ask for additional info from OEM sales team!
